TORQUE MEASUREMENT ACCESSORY

Water-Resistant Housing

BINSFELD ENGINEERING INC

Protecting the TT10K-LP transmitter from water and debris is easier than ever with the Water-Resistant Housing Accessory.

Built and designed for environments with excessive moisture, the all-inclusive system shields transmitter electronics by enclosing the assembly with a pair of robust nylon housings and sealed wire connections. The add-on is easily installed - just insert the battery and transmitter into the housings, assemble using sealed covers, and connect the electronics using the provided water-resistant cables. This accessory increases the durability of the transmitter assembly without sacrificing functionality, ensuring reliable torque measurement data transmission from the shaft in the wettest conditions.

Features

WATER-RESISTANT
Tested to IP66

RUGGED
Durable nylon housing is built for demanding applications and features V-groove for secure mounting to the shaft.

EASY INSTALL
Pre-wired battery connection and thumbscrews ensure quick install time.

ALL-INCLUSIVE SEALED SYSTEM
Includes all wiring, sealing, and mounting hardware necessary to fully encase transmitter electronics.
